

Canadian Anesthesia Research Priority Setting Partnership

How we decided the Top 10 priorities

1. Gathering questions about anesthesia and care around the time of surgery

254 people from across Canada – patients, family, and caregivers, as well as health care providers – completed a survey asking for their questions about anesthesia and care around the time of surgery.

2. Working with the data

Questions were categorized, merged and summarized, then checked against existing research evidence.

3. Interim ranking

233 people from across Canada completed a second survey to shortlist the 49 questions.

4. Final priority setting

22 people from across Canada – patients, family, and caregivers, as well as health care providers – participated in a 1-day workshop to review and rank the shortlisted questions.
